

# Pakistan

## Rail Sector Profile

Population (2023)  
**240.5 Million**

Gross domestic product (GDP), PPP (2022)  
**1.52 Trillion USD**

(1,2)

PPP = Purchasing power parity

### Heavy Railway

Heavy rail route length (2020)  
**7,791 km**

(3,6)

Heavy railway route lengths in Asia-Pacific (kilometers)

(3,6)

Between 2000 to 2020, Pakistan added 0.0 kilometers of heavy railway routes, expanding 0.0% annually

Single-track routes (2019)  
**81.9%**

Double-track routes (2019)  
**31.3%**

(4)

Electrified routes  
**n.d.**

(3)

Availability per capita  
**34.3 kilometers per million population**

(3,6)

Density per sqkm  
**10.1 kilometers per thousand sqkm**

(3,6)

sqkm = square kilometer

Availability per capita in Asia-Pacific

Density per sqkm in Asia-Pacific

This rail sector profile was developed by the Asian Transport Outlook (ATO) with the contribution by the United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP), which provided information on the Trans-Asian Railway Network routes. The ATO is an initiative developed under TA-6763 REG: Accelerating Innovation in Transport - Asian Transport Outlook: Phase 3 (55119-001) of the Asian Development Bank (ADB) and is also being supported by the Asian Infrastructure Investment Bank (AIIB) through Purchase Order No. CW39446 AIIB Support: Asian Transport Outlook Phase 3.

The Asian Transport Outlook (ATO) project collects, collates, and organizes data from publicly available official, as well as reputable and peer-reviewed secondary sources, which may contain incomplete or inconsistent data. It is important to note that the ATO does not generate data. Moreover, while the ATO carries out quality control and assurance of whether the data are truthfully reflected in the ATO, the ATO does not make any warranties or representations as to the appropriateness, quality, accuracy, or completeness of the data in the ATO databases, and in the knowledge products that are produced from such. Users are encouraged to scrutinize, verify, interpret, and judge the data before utilizing them.

Urban Railway

Metro length (2021) <b>n.d.</b>	Light rail transit (LRT) length <b>n.d.</b>	Urban rail availability per capita in Asia-Pacific (4)
Number of cities with urban rail systems (2021) <b>4</b>		(4)
Urban rail availability per capita (2021) <b>n.d.</b>		(4)

Activity

Passenger-kilometers (PKM) (2018) <b>24.9 billion</b>	Tonne-kilometers (TKM) (2018) <b>8.1 billion</b>	(3)
--	---	-----

Between 2000 to 2018, PKM increased annually by 1.7%. Between 2000 to 2018, TKM increased annually by 4.6%

Transport units and utilization trend

Transport units = passenger-kilometers + tonne-kilometers

Utilization of railways in Asia-Pacific

This rail sector profile was developed by the Asian Transport Outlook (ATO) with the contribution by the United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP), which provided information on the Trans-Asian Railway Network routes. The ATO is an initiative developed under TA-6763 REG: Accelerating Innovation in Transport-Asian Transport Outlook: Phase 3 (55119-001) of the Asian Development Bank (ADB) and is also being supported by the Asian Infrastructure Investment Bank (AIIB) through Purchase Order No. CW39446 AIIB Support: Asian Transport Outlook Phase 3.

## Policy Measures and Targets

Policy document	Year	Rail-related measures
Pakistan Updated NDC 2021	2021	Urban passenger rail infrastructure improvement
National Transport Policy of Pakistan 2018	2018	Rail infrastructure expansion, Urban passenger rail infrastructure improvement, General rail improvement, Freight transport shifting to rail or inland waterways (IWT)
Pakistan's First Biennial Update Report	2022	Urban passenger rail infrastructure improvement, General public transport
National Freight and Logistics Policy	2020	Rail infrastructure expansion, General rail improvement, Development of rail plan/ policy
Technology Needs Assessment Report for Climate Change Mitigation	2016	Rail infrastructure expansion, General rail improvement
Pakistan 2025	2014	Rail infrastructure expansion, General rail improvement
National Climate change Policy	2012	Rail infrastructure expansion, General rail improvement
Pakistan in the 21st Century Vision 2030	2007	Rail infrastructure expansion, High-speed rail (HSR), General rail improvement, General transport target - Transport activity
National Clean Air Plan	2022	
Pakistan's Intended Nationally Determined Contribution	2015	Urban passenger rail infrastructure improvement

This rail sector profile was developed by the Asian Transport Outlook (ATO) with the contribution by the United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP), which provided information on the Trans-Asian Railway Network routes. The ATO is an initiative developed under TA-6763 REG: Accelerating Innovation in Transport - Asian Transport Outlook: Phase 3 (55119-001) of the Asian Development Bank (ADB) and is also being supported by the Asian Infrastructure Investment Bank (AIIB) through Purchase Order No. CW39446 AIIB Support: Asian Transport Outlook Phase 3.

Users are encouraged to scrutinize, verify, interpret, and judge the data before utilizing them.

## Key Data Trends

- **Heavy Rail Infrastructure:** Pakistan's heavy rail network spans 7,791 kilometers, with a density of 34.3 kilometers per million population. However, infrastructure development has stagnated, with no new routes added between 2000 and 2020.
- **Urban Rail Infrastructure:** Urban rail development lags significantly, with only four cities having rapid transit systems and a low per capita urban rail infrastructure.
- **Activity:** Passenger and freight transport have seen moderate growth, with annual increases of 1.7% and 4.6%, respectively, between 2000 and 2018. Rail utilization remains relatively low.
- **Energy Consumption:** The rail sector's energy consumption has increased, but its share of total transport energy use remains marginal at 1.5%. Energy efficiency has improved, with a decrease in energy consumption per unit of GDP.
- **Emissions:** Rail emissions contribute a small portion (1.7%) to total transport emissions. However, emissions growth has been observed between 2010 and 2022. The rail sector contributes significantly to air pollutants like PM10, NOx, and SOx.
- **Investments:** Public-private partnerships and official development assistance in the rail sector have been limited, hindering infrastructure development and modernization.
- **Digitalization and Quality:** Pakistan's digital readiness and rail infrastructure and services quality are relatively low.
- **Adaptation and Resilience:** Climate hazards pose a significant risk to Pakistan's rail infrastructure, with estimated annual losses of \$4.9 million.

## Policy Landscape

- **Key Documents:** Pakistan has several policy documents addressing the rail sector, including the National Transport Policy, National Freight and Logistics Policy, Pakistan in the 21st Century Vision 2030, and Nationally Determined Contributions (NDCs).
- **Policy Priorities:** These documents emphasize infrastructure expansion, urban rail improvement, high-speed rail development, general rail improvement, freight transport shifting to rail, and the development of a comprehensive rail plan.
- **NDC Gaps and Alignment:** While Pakistan's NDCs include targets for reducing emissions and improving resilience in the transport sector, there is a misalignment between these targets and the policies outlined in other documents. The ambitious target of increasing rail's share of freight transport to 22% by 2030 faces challenges due to limited investments and infrastructure development.

## Opportunities

Pakistan's railway sector holds significant potential for growth and development, with several key opportunities identified. Electrification of the rail network stands out as a major step toward reducing environmental impact and improving energy efficiency. Modernization and expansion of existing infrastructure are crucial to enhance capacity and service quality, attracting more passengers and freight. Digitalization can streamline operations and improve the overall passenger experience, while climate resilience measures ensure the network's longevity. Policy coherence across various sectors is vital for achieving sustainable development.

In light of these opportunities, the following priorities emerge: Prioritizing investments in infrastructure development, modernization, and electrification lays the foundation for a robust rail system. Strengthening policy coherence and alignment across different sectors ensures coordinated progress. Integrating climate resilience into planning protects the network from the impacts of climate change. Leveraging digital technologies further enhances operational efficiency and service quality. Finally, promoting public-private partnerships can mobilize additional investments, accelerating the sector's growth. By focusing on these key priorities, Pakistan can unlock the full potential of its rail network and contribute to sustainable development. By implementing these suggestions, Pakistan can unlock the potential of its rail sector to contribute to a sustainable and climate-resilient future.

## Conclusion

Pakistan's rail sector faces significant challenges in addressing climate change and achieving sustainable development goals. Policy documents outline ambitious targets, but limited investments, infrastructure constraints, and policy misalignments hinder progress. However, opportunities exist to leverage electrification, modernization, digitalization, and climate resilience to transform the rail sector into a critical driver of low-carbon and climate-resilient transport.

This rail sector profile was developed by the Asian Transport Outlook (ATO) with the contribution by the United Nations Economic and Social Commission for Asia and the Pacific (UNESCAP), which provided information on the Trans-Asian Railway Network routes. The ATO is an initiative developed under TA-6763 REG: Accelerating Innovation in Transport-Asian Transport Outlook: Phase 3 (55119-001) of the Asian Development Bank (ADB) and is also being supported by the Asian Infrastructure Investment Bank (AIIB) through Purchase Order No. CW39446 AIIB Support: Asian Transport Outlook Phase 3.
