Policy Measures and Targets

Policy document	Target year	Rail-related targets
Updated Nationally Determined Contribution	2030	ensure transition of 80% (about 6,500) of public transport units to gas fuel and electric traction
Voluntary National Review 2023	2026	The targets have been defined to increase the electrification level of railway infrastructure to 60%
Updated Nationally Determined Contribution	2030	ensure transition of 80% (about 6,500) of public transport units to gas fuel and electric traction
First Biennial Update Report of the Republic of Uzbekistan	2030	The concept of environmental protection until 2030 contains measures to: a) transfer 80% of public transport to gas fuel and electric traction
Draft Strategy for the Development of the Transport System of the Republic of Uzbekistan until 2035	2035	develop a program of measures for the introduction of transport interchange systems, primarily through the introduction of a model of transport interchange nodes in large, large and major cities of the country (14 units by 2035);
Draft Strategy for the Development of the Transport System of the Republic of Uzbekistan until 2035	2035	Reducing the level of specific transportation costs in the price of products by 2035 according to the basic option - from 15 percent in 2018 to 10% in 2035, according to the innovative option - up to 7 percent.
First Biennial Update Report of the Republic of Uzbekistan	2025	reduction of CO2 emissions per 1 reduced t-km by automobile transport- by 2025 by 5%, by 2035 by 10%, by railway transport- by 2025 by 15%, by 2035 by 24%,
First Biennial Update Report of the Republic of Uzbekistan	2025	reduction of CO2 emissions per 1 reduced t-km by automobile transport- by 2025 by 5%, by 2035 by 10%, by railway transport- by 2025 by 15%, by 2035 by 24%,
Voluntary National Review 2023	2026	increase the transit cargo turnover to 15 million tons.
Development Strategy of New Uzbekistan for 2022-2026	2026	Expansion of "green corridors" and transit opportunities in the transport system for foreign trade, as well as an increase in the volume of transit cargo turnover up to 15 million tons.

Policy measures and targets were extracted from policy documents as listed in the ATO National Transport Policies Database

The Current Landscape

Uzbekistan's railway network, vital to the nation's transportation, spans 4,642 kilometers. While heavy rail dominates, the urban rail network is limited, with only 50 kilometers of rapid transit in Tashkent. The rail sector has seen mixed activity, with passenger kilometers decreasing and tonne-kilometers increasing. Energy consumption has risen, with electricity now representing 23% of total energy use. The sector's CO₂ emissions have declined, contributing only 2.2% to total transport emissions.

Key Points:

CO₂ Emissions: Although the rail sector's CO₂ emissions are relatively low at 2.2%, there's potential for further reduction. The increasing grid emission factor between 2010 and 2021 underscores the need for cleaner energy sources.

Energy Consumption: The growth in the rail sector's energy consumption, with electricity making up 23%, highlights the importance of energy efficiency and electrification.

Infrastructure: Uzbekistan has progressed in expanding its heavy rail network, but the urban railway infrastructure requires development, with only 50 kilometers of rapid transit.

Climate Change Impacts and Adaptation

Uzbekistan's rail infrastructure faces an estimated annual loss of 2.2 million USD due to climate hazards, representing 27% of average annual losses to the entire transport sector. This underscores the vulnerability of the rail network to climate change impacts. Adaptation and resilience measures are critical to ensure the continued operation and safety of the railway system in the face of increasing climate risks.

Policy Landscape and NDC Alignment

Uzbekistan has developed several policy documents addressing the rail sector and climate change. The "Draft Strategy for the Development of the Transport System of the Republic of Uzbekistan until 2035" and the "Updated Nationally Determined Contribution (NDC)" outline key targets and measures. However, gaps remain in fully aligning NDCs with policy priorities and opportunities. The NDC's target of transitioning 80% of public transport to gas fuel and electric traction by 2030 is ambitious but faces challenges in implementation and financing.

Policy Priorities and Opportunities

Uzbekistan has opportunities to enhance the climate resilience of its rail network and reduce its carbon footprint. Key priorities include:

- **Expanding electrification:** Increasing the electrification of the rail network will reduce reliance on fossil fuels and decrease greenhouse gas emissions. The target of 60% electrification by 2030 is a positive step, but further investments and policy support are needed.
- **Promoting intermodality:** Encouraging the seamless transfer of goods and passengers between different modes of transport, such as rail and road, can optimize transport efficiency and reduce emissions. Developing transport interchange nodes in major cities is crucial for achieving this.
- **Investing in renewable energy:** Expanding the use of renewable energy sources in the rail sector can further decarbonize operations and contribute to national climate goals.
- **Enhancing adaptation and resilience:** Implementing measures to protect rail infrastructure from climate hazards, such as extreme weather events and temperature changes, is essential for ensuring the long-term viability of the network.

Conclusion

Uzbekistan's railway sector faces both challenges and opportunities in the context of climate change. While progress has been made in reducing emissions and improving energy efficiency, further efforts are needed to achieve full alignment with NDC targets and enhance the climate resilience of the rail network. By prioritizing electrification, intermodality, renewable energy, and adaptation measures, Uzbekistan can build a sustainable and resilient railway system that supports its development goals and contributes to global climate action.
